Introduction

Hans-Petter Halvorsen

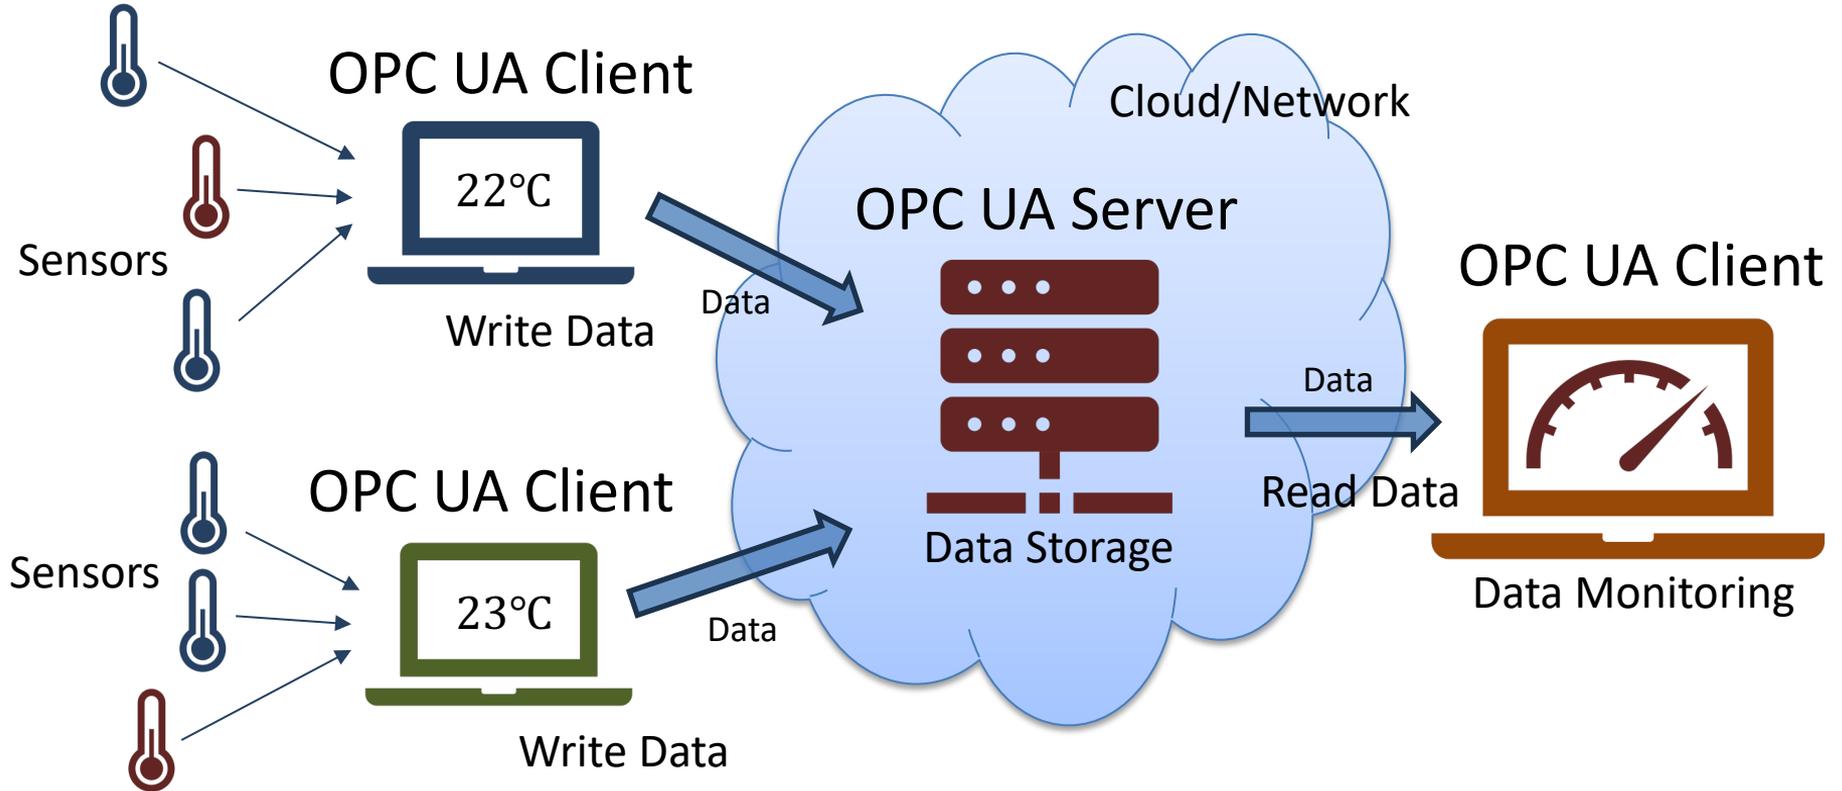

[Table of Contents](#)

Introduction

- This Tutorial will use the OPC UA protocol to send data between different devices or different programs.
- OPC UA is a communication protocol.
- OPC UA is mainly used for industrial purposes (industrial automation), and it is one of the most used protocols in the industry today.
- OPC UA is maintained by: <https://opcfoundation.org>.
- Python is a widely used multi-purpose Programming language and one of the most used programming languages today.
- Python is maintained by: <https://www.python.org>.

OPC UA Example

We will create different OPC UA Clients and an OPC UA Server in this Tutorial

Introduction

- There exists lots of different OPC packages and libraries for Python.
- This Tutorial will demonstrate OPC UA in Python with some basic Code Examples using the “**opcua**” Python package.
- This Tutorial will use the **Thonny** Python Editor and the **Spyder** Python Editor, but other Python Editors can of course also be used.
- This Tutorial will use the **OPC UA Server Simulator** from Integration Objects (free OPC UA server for Test and Demonstration purposes), but other OPC UA Servers can of course also be used.
- We will create both OPC UA Clients and an OPC UA Server using Python and the “**opcua**” Python package.

Software

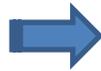

The following software is used in this Tutorial:

- Thonny Python Editor
<https://thonny.org>
- Spyder Python Editor. You can download it separately or part of Anaconda Python Distribution
<https://www.spyder-ide.org>
<https://www.anaconda.com>
- Python package/library opcua
<https://pypi.org/project/opcua/>
- OPC UA Server Simulator:
<https://integrationobjects.com/sioth-opc/sioth-opc-unified-architecture/opc-ua-server-simulator/>
- UaExpert OPC UA Client:
<https://www.unified-automation.com/products/development-tools/uaexpert.html>

OPC Specifications

OPC is a standard that defines the communication of data between devices from different manufactures. OPC requires an **OPC Server** that communicates with one or more **OPC Clients**

“Classic” OPC

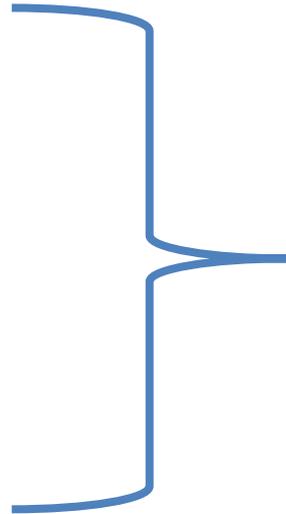

“Next Generation” OPC

OPC DA

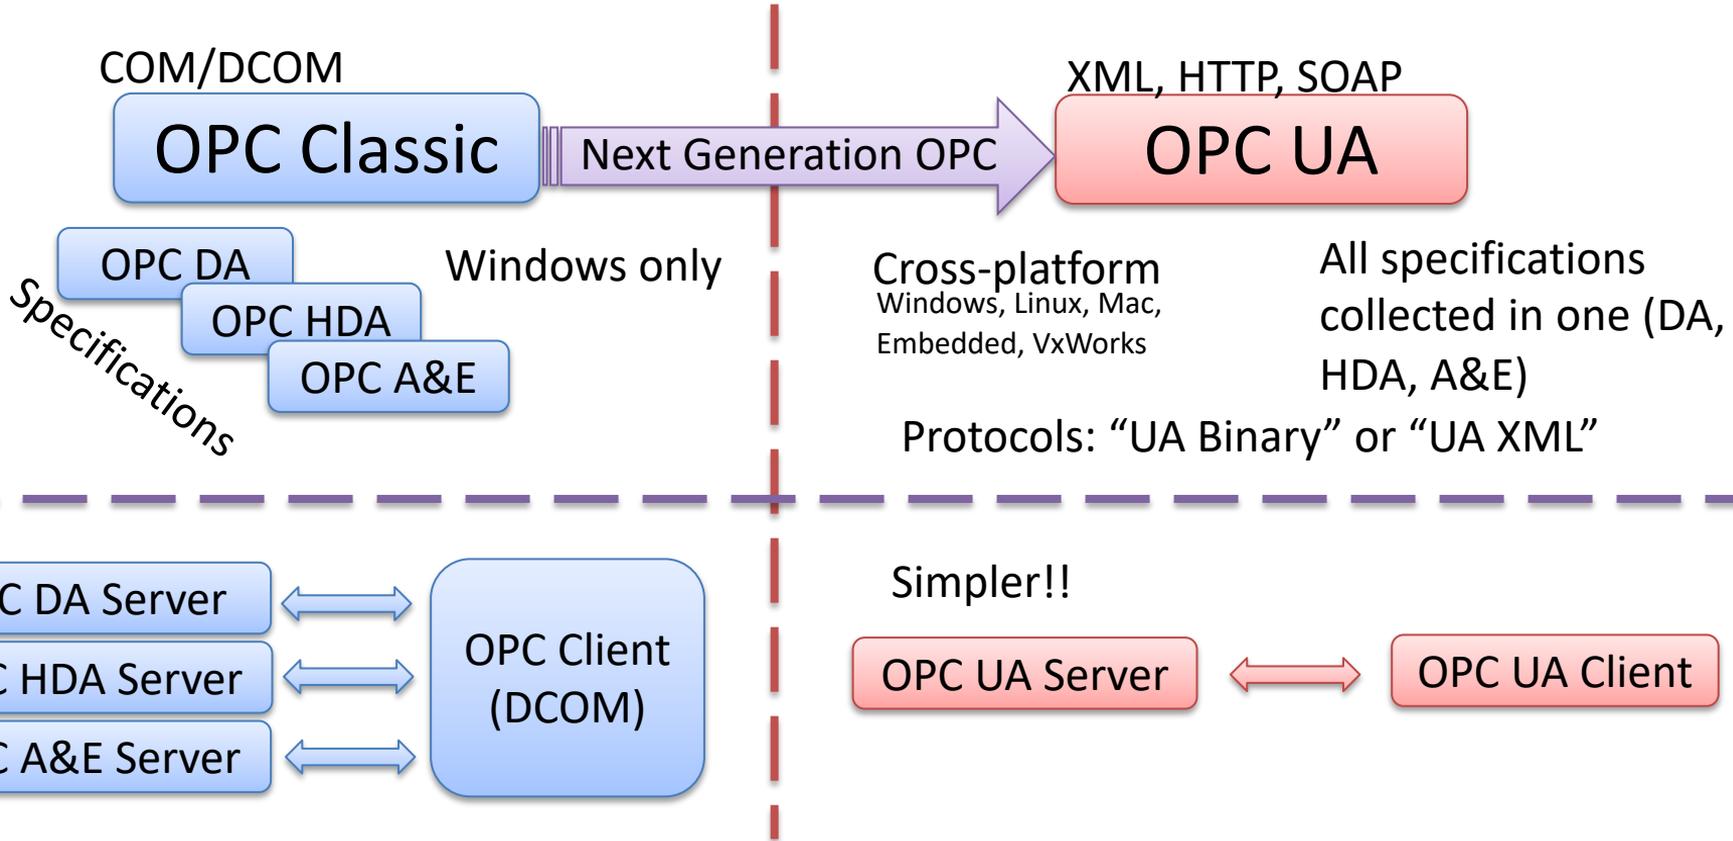

OPC HDA

OPC A&E

OPC UA

Next Generation OPC

OPC UA – Server and Clients

OPC is a standard that defines the communication of data between devices from different manufactures. OPC requires an **OPC Server** that communicates with one or more **OPC Clients**.

OPC UA Examples in this Tutorial

Installation of “opcua” Thonny

The image displays two screenshots of the Thonny package manager interface, showing the search and installation details for the 'opcua' package.

Left Screenshot: Search Results

- Search input: `opcua`
- Search button: `Search on PyPI`
- Search results list (left sidebar):
 - <INSTALL>
 - adafruit-board-toolkit
 - astroid
 - asttokens
 - bcrypt
 - bitstring
 - ffi
 - colorama
 - contourpy
 - cryptography
 - cycler
 - deprecation
 - dill
 - dnspython
 - docutils
 - ecdsa
 - esptool
 - fonttools
 - guizero
 - isort
 - jedi
 - kiwisolver
 - lazy-object-proxy
- Search results list (main area):
 - opcua** (highlighted): Pure Python OPC-UA client and server library
 - [opcua-webclient](#): A OPCUA web client, implemented by Python.
 - [opcua-widgets](#): OPC-UA Widgets
 - [opcua-modeler](#): OPC-UA Address Space Modeler
 - [formic-opcua](#): <No description>
 - [opcua-client](#): OPC-UA Client GUI
 - [opcua-tools](#)

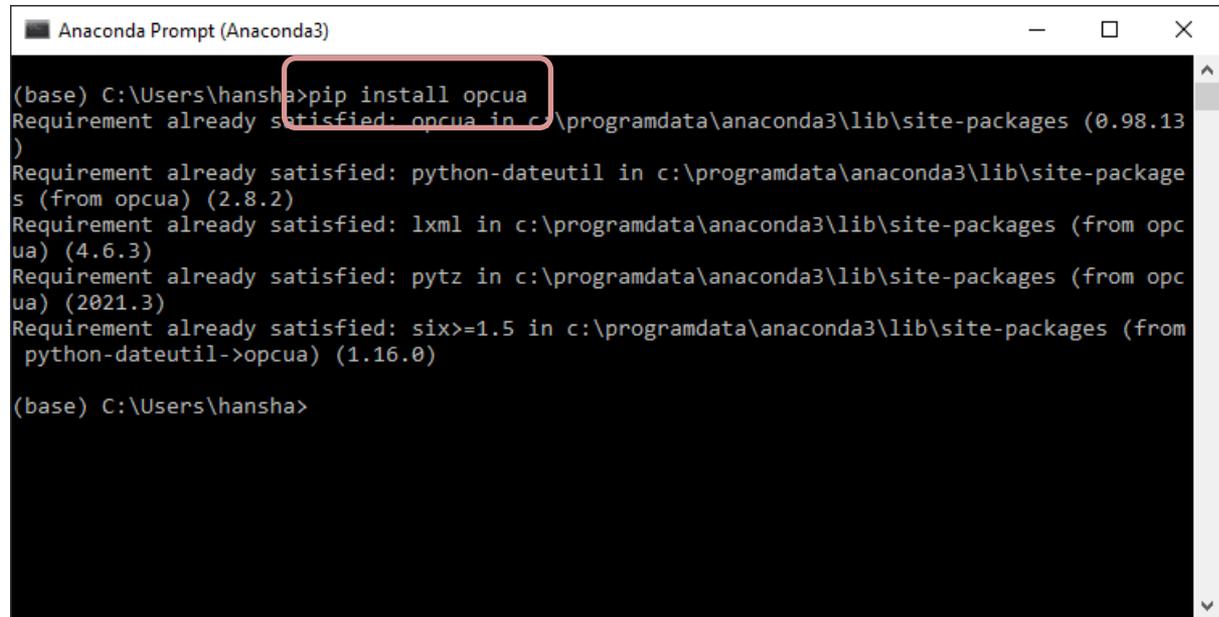

Right Screenshot: Package Details

- Search input: `opcua`
- Search button: `Search on PyPI`
- Package name: `opcua`
- Installed version: 0.98.13
- Installed to: `C:\Users\hansha\AppData\Roaming\Python\Python310\site-packages`
- Latest stable version: 0.98.13
- Summary: Pure Python OPC-UA client and server library
- Author: Olivier Roulet-Dubonnet
- Homepage: <http://freeopcua.github.io/>
- PyPI page: <https://pypi.org/project/opcua/>
- Package list (left sidebar):
 - isort
 - jedi
 - kiwisolver
 - lazy-object-proxy
 - lxml
 - matplotlib
 - mccabe
 - mypy
 - mypy-extensions
 - nidaqmx
 - numpy
 - opcua** (highlighted)
 - packaging
 - paho-mqtt
 - paramiko
 - parso
 - pillow
 - pip
 - platformdirs
 - pyparser
 - pylint
 - pymongo
 - pynacl
- Buttons: Upgrade, Uninstall, ..., Close

Installation of “opcua” Anaconda

You can use the “**Anaconda Prompt**” that comes with the Anaconda Distribution

pip install opcua

A screenshot of the Anaconda Prompt terminal window. The title bar reads "Anaconda Prompt (Anaconda3)". The terminal shows the command `pip install opcua` being executed. The output indicates that the package is already installed in the current environment. A red box highlights the command `pip install opcua`.

```
(base) C:\Users\hansha>pip install opcua
Requirement already satisfied: opcua in c:\programdata\anaconda3\lib\site-packages (0.98.13)
Requirement already satisfied: python-dateutil in c:\programdata\anaconda3\lib\site-packages (from opcua) (2.8.2)
Requirement already satisfied: lxml in c:\programdata\anaconda3\lib\site-packages (from opcua) (4.6.3)
Requirement already satisfied: pytz in c:\programdata\anaconda3\lib\site-packages (from opcua) (2021.3)
Requirement already satisfied: six>=1.5 in c:\programdata\anaconda3\lib\site-packages (from python-dateutil->opcua) (1.16.0)

(base) C:\Users\hansha>
```

OPC UA Simulation Server

Integration Objects

Hans-Petter Halvorsen

[Table of Contents](#)

OPC UA Server Simulator

- “OPC UA Server Simulator” from Integration Objects is a free OPC UA Server
- You can use it for Test and Demonstration purposes.
- It runs 48 hours before you need to restart it
- Users can configure their own OPC Tags via CSV files
- Download:
<https://integrationobjects.com/sioth-opc/sioth-opc-unified-architecture/opc-ua-server-simulator/>

OPC UA Server Simulator

The screenshot shows the OPC UA Server Simulator application window. The title bar reads "OPC UA Server Simulator" with standard window controls. The menu bar includes "File", "Settings", and "Help". A text field for "Server Endpoints URLs" contains the address "opc.tcp://xps15hph:62640/IntegrationObjects/ServerSimulator". Below this are two main sections: "Sessions" and "Subscriptions", each with a table header and an empty data area. The "Sessions" table has columns for SessionId, Name, User, and Last Contact. The "Subscriptions" table has columns for SubscriptionId, Publishing Interval, Item Count, and Seq No. A status bar at the bottom displays: "Status: Running", "Current Time: 11:01:11", "Sessions: 0", "Subscriptions: 0", and "Items: 0".

OPC UA Server Simulator

File ▾ Settings ▾ Help ▾

Server Endpoints URLs

Sessions

SessionId	Name	User	Last Contact
-----------	------	------	--------------

Subscriptions

SubscriptionId	Publishing Interval	Item Count	Seq No
----------------	---------------------	------------	--------

Status: Running Current Time: 11:01:11 Sessions: 0 Subscriptions: 0 Items: 0

OPC UA Client

- Integration Objects also offer a free OPC UA Client
- You can use it for Test and Demonstration purposes
- Download:
<https://integrationobjects.com/sioth-opc/sioth-opc-unified-architecture/opc-ua-client/>

OPC UA Client

The screenshot displays the OPC UA Client software interface. The main window is titled "Integration Objects' OPC UA Client" and features a ribbon menu with options like New, Open, Save, Connect, Disconnect, Settings, UA Settings, Help, About, Define, Remove, and Certificate Manager. A "Connection Settings" dialog box is open in the foreground, showing the following configuration:

- Session Information:** Session Name: Session0
- Server Information:** Endpoint Uri: opc.tcp://xps15hph:62640/IntegrationObjects/! (Discover button)
- Transport Protocol:** Opc.tcp, Https
- Message Encoding:** Binary, Xml
- Security Mode:** None, Sign, Sign_Encrypt
- Security Policy:** None, Basic128RSA15, Basic256, Basic256Sha256
- User Authentication Mode:** Anonymous, UserName, Certificate
- Certificate (.pfx) and Password fields are empty.

The background interface shows a "Sessions" list, an "Address Space" view, and a "Messages" table at the bottom. The Messages table contains the following data:

Message Type	Timestamp	Message
[Control]	2022-02-08 13:05:06	Disconnecting from session
[Control]	2022-02-08 13:03:09	Read operation of the variab
[Control]	2022-02-08 13:01:03	A session "Session0" with the

At the bottom left, it indicates "3 Messages".

UaExpert

OPC UA Client

Unified Automation

Hans-Petter Halvorsen

[Table of Contents](#)

UaExpert

- UaExpert is an OPC UA Client from Unified Automation
- Homepage:
<https://www.unified-automation.com>
- Download UaExpert:
<https://www.unified-automation.com/downloads/opc-ua-clients.html>

UaExpert OPC UA Client

The screenshot displays the UaExpert OPC UA Client interface. The main window is titled "Unified Automation UaExpert - The OPC Unified Architecture Client - NewProject". The interface includes a menu bar (File, View, Server, Document, Settings, Help), a toolbar, and several panels:

- Project:** Shows a tree view with "Project", "Servers" (LabVIEW OPC UA Server, Python OPC UA Server, OPC UA Server Simulator from I...), and "Documents" (Data Access View, Data Access View-1).
- Address Space:** Shows a tree view with "No Highlight", "Tag5", "Tag6", "Tag7" (selected), "Tag8", "Tag9", "Server", "Types", and "Views".
- Data Access View:** A table showing data from the OPC UA Server. The table has columns: #, Server, Node Id, Display Name, Value, Datatype, Source Timestamp, and Server Timestamp.
- Attributes:** Shows the attributes for the selected node (Tag7). The "Value" attribute is highlighted, showing its details: NamespaceIndex (2), IdentifierType (String), Identifier (Tag7), NodeClass (Variable), BrowseName (2, "Tag7"), DisplayName ("en", "Tag7"), Description (Invalid Datatype: Ex...), and Value (SourceTimestamp: 2023-12-05 14:39:03, SourcePicoSeconds: 0, ServerTimestamp: 2023-12-05 14:39:12, ServerPicoSeconds: 0, StatusCode: Good (0x00000000)).
- References:** Shows the references for the selected node, including "HasTypeDefiniti..." and "BaseDataVariableType".
- Log:** A log window showing the sequence of events and messages from the OPC UA Server.

#	Server	Node Id	Display Name	Value	Datatype	Source Timestamp	Server Timestamp

Python OPC UA Client Examples

Hans-Petter Halvorsen

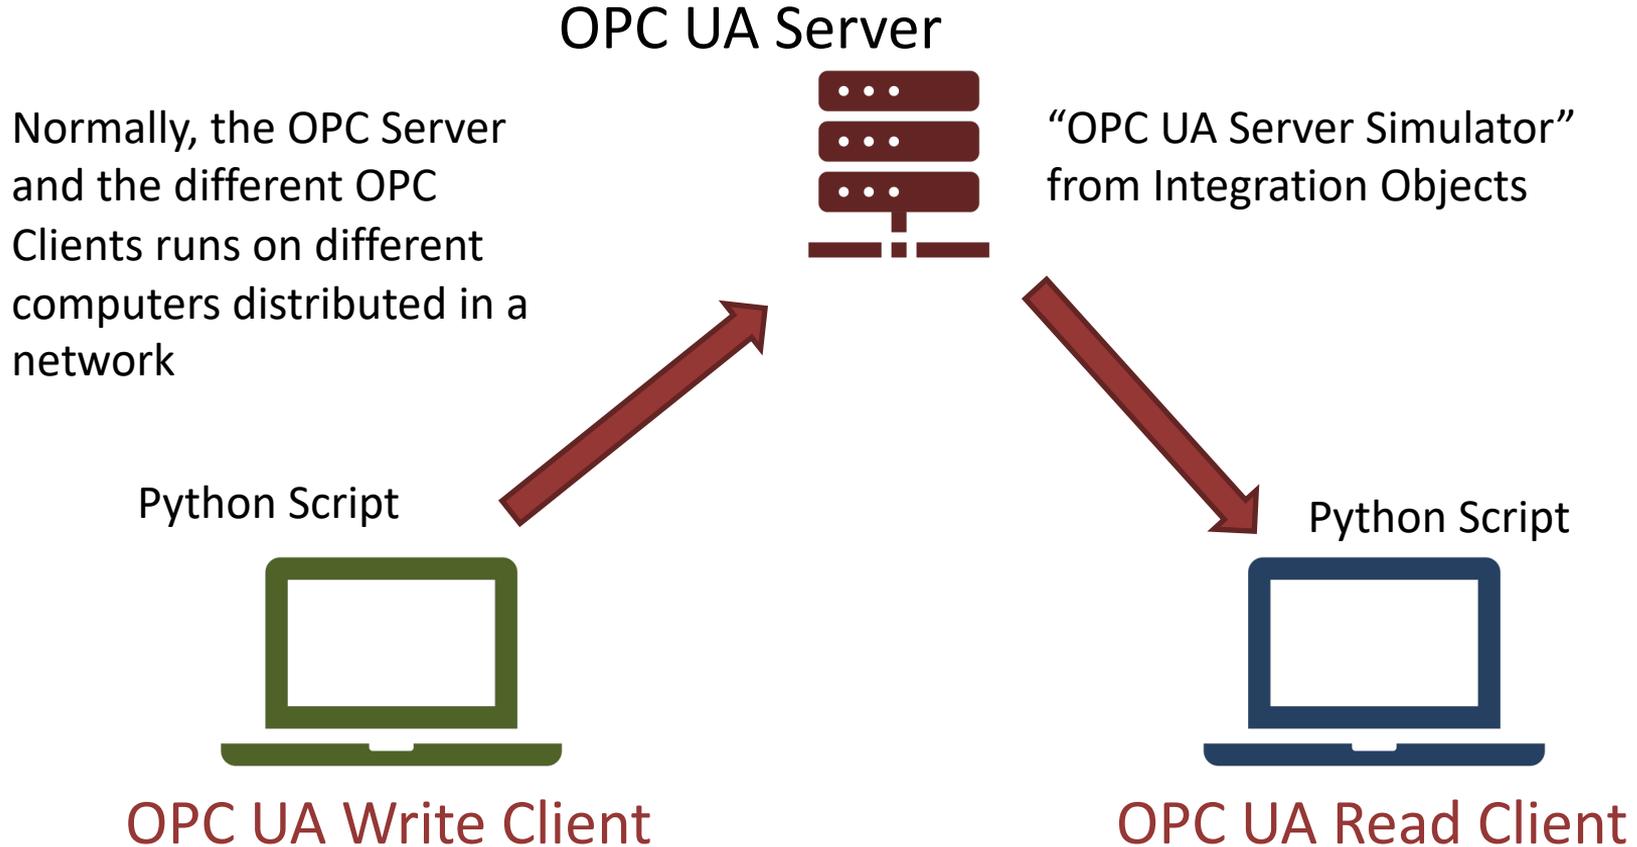

[Table of Contents](#)

Python OPC UA Client Examples

- We start with creating OPC UA Clients with Python
- Typically, most of the times we need to create OPC UA clients, while we use existing OPC UA Servers from different vendors that already exists in our system
- Here, we will use the “OPC UA Server Simulator” from Integration Objects for Testing our OPC UA Python examples

Python OPC UA Client Examples

OPC UA Client Write

```
from opcua import Client

url = "xxx"
nodeId = "xxx"

client = Client(url)
client.connect()

node = client.get_node(nodeId)
value = float(20)
node.set_data_value(value)

client.disconnect()
```

OPC UA Client Read

```
from opcua import Client

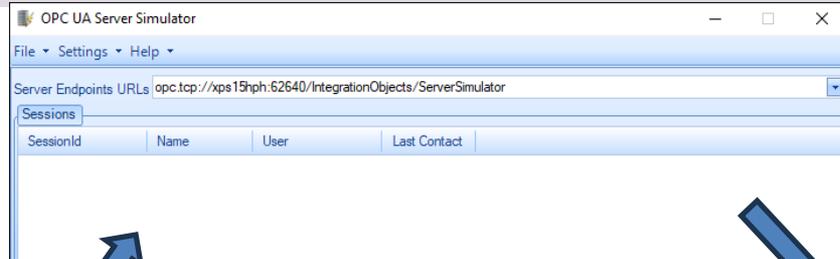

url = "xxx"
nodeId = "xxx"

client = Client(url)
client.connect()

node = client.get_node(nodeId)
value = node.get_value()
print(value)

client.disconnect()
```

Python OPC UA Client Examples

The screenshot shows a Python IDE window with the file "opcua_client_write_ex.py" open. The code is as follows:

```
1 from opcua import Client
2
3 #OPC UA Server Simulator from Integration Objects
4 url = "opc.tcp://localhost:62640/IntegrationObjects/ServerSimulator/"
5 nodeId = "ns=2;s=Tag7"
6
7 client = Client(url)
8 client.connect()
9
10 node = client.get_node(nodeId)
11 value = float(22)
12 node.set_data_value(value)
13
14 client.disconnect()
```

A red callout box with the text "Write Data to OPC UA Server" is positioned over the code. Below the code editor is a shell window showing the command "%Run opcua_client_write_ex.py" being executed.

The screenshot shows a Python IDE window with the file "opcua_client_read_ex.py" open. The code is as follows:

```
1 from opcua import Client
2
3 #OPC UA Server Simulator from Integration Objects
4 url = "opc.tcp://localhost:62640/IntegrationObjects/ServerSimulator/"
5 nodeId = "ns=2;s=Tag7"
6
7 client = Client(url)
8 client.connect()
9
10 node = client.get_node(nodeId)
11 value = node.get_value()
12 print(value)
13
14 client.disconnect()
```

A red callout box with the text "Read Data from OPC UA Server" is positioned over the code. Below the code editor is a shell window showing the command "%Run opcua_client_read_ex.py" being executed, with the output "22.0" displayed.

OPC UA Client Write Example

```
from opcua import Client

#OPC UA Server Simulator from Integration Objects
url = "opc.tcp://localhost:62640/IntegrationObjects/ServerSimulator/"
nodeId = "ns=2;s=Tag7"

client = Client(url)
client.connect()

node = client.get_node(nodeId)
value = float(20)
node.set_data_value(value)

client.disconnect()
```

OPC UA Client Read Example

```
from opcua import Client

#OPC UA Server Simulator from Integration Objects
url = "opc.tcp://localhost:62640/IntegrationObjects/ServerSimulator/"
nodeId = "ns=2;s=Tag7"

client = Client(url)
client.connect()

node = client.get_node(nodeId)
value = node.get_value()
print(value)

client.disconnect()
```

Improvements

We improve the basic Write and Read Examples

- Adding While Loop, etc.
- Error Handling
- Getting Data from a real Sensor, e.g., a Temperature Sensor
 - I will create a “Simulator” that simulates a real Temperature Sensor using the Random Generator in Python

OPC UA Client **Write** Example

```
from opcua import Client
import time
import random

#OPC UA Server Simulator from Integration Objects
url = "opc.tcp://localhost:62640/IntegrationObjects/ServerSimulator/"
nodeId = "ns=2;s=Tag7"

client = Client(url)
client.connect()
print("OPC UA Client Connected")
print("Press Ctrl-C to Stop Program")

try:
    while True:
        value = random.randint(20,30)
        print(value)

        node = client.get_node(nodeId)
        value = float(value)
        node.set_data_value(value)
        time.sleep(10)

except KeyboardInterrupt:
    pass

client.disconnect()
print("OPC UA Client Disconnected and Program Stopped")
```

OPC UA Client Read Example

```
from opcua import Client
import time

#OPC UA Server Simulator from Integration Objects
url = "opc.tcp://localhost:62640/IntegrationObjects/ServerSimulator/"
nodeId = "ns=2;s=Tag7"

client = Client(url)
client.connect()
print("OPC UA Client Connected")
print("Press Ctrl-C to Stop Program")

try:
    while True:
        node = client.get_node(nodeId)
        value = node.get_value()
        print(value)
        time.sleep(10)

except KeyboardInterrupt:
    pass

client.disconnect()
print("OPC UA Client Disconnected and Program Stopped")
```

Python OPC UA Server Examples

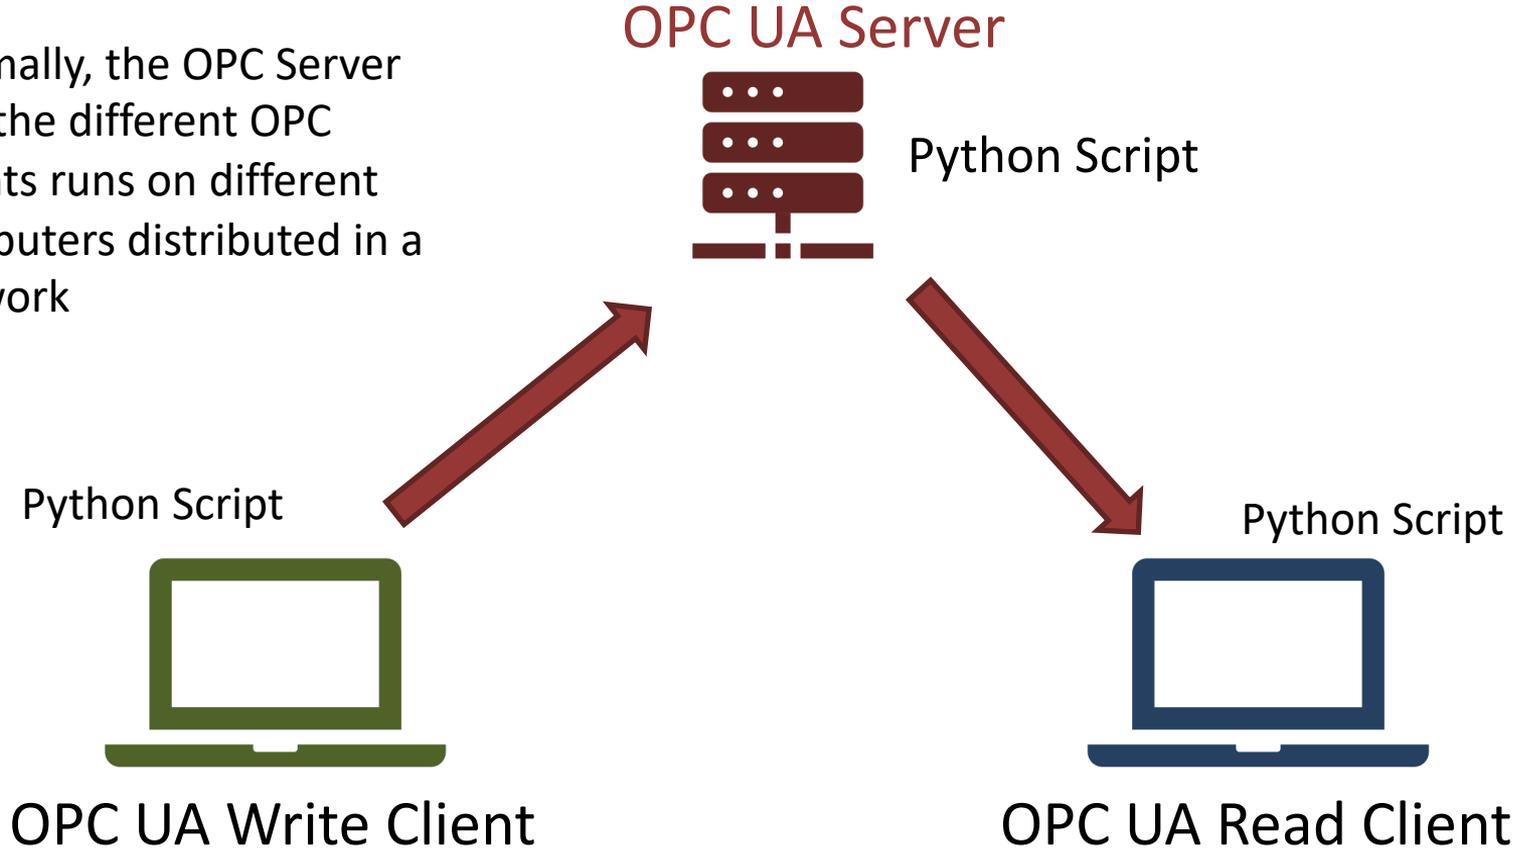

Hans-Petter Halvorsen

[Table of Contents](#)

Python OPC UA Server

Normally, the OPC Server and the different OPC Clients runs on different computers distributed in a network

OPC UA Server

```
from opcua import Server
```

```
server = Server()
```

```
server_url = "opc.tcp://127.0.0.1:1234"
```

```
server.set_endpoint(server_url)
```

```
name = "opcuapython"
```

```
namespace = server.register_namespace(name)
```

```
node = server.get_objects_node()
```

```
param = node.add_object(namespace, "Sensors")
```

```
var = param.add_variable(namespace, "Temperature", 0)
```

```
var.set_writable()
```

```
server.start()
```

This is the main Python code
for creating an OPC UA Server

OPC UA Server

```
from opcua import Server
import time
from datetime import datetime

server = Server()
server_url = "opc.tcp://127.0.0.1:1234"
server.set_endpoint(server_url)

name = "opcuapython"
namespace = server.register_namespace(name)
node = server.get_objects_node()
param = node.add_object(namespace, "Sensors")
var = param.add_variable(namespace, "Temperature", 0)
var.set_writable()

server.start()
print("OPC UA Server Started")
print("Press Ctrl-C to Stop Program")

try:
    while True:
        now = datetime.now()
        current_time = now.strftime("%H:%M:%S")
        print("OPC UA Server Running", current_time)
        value = var.get_value()
        print("Current Value:", value)
        time.sleep(1)

except KeyboardInterrupt:
    pass

server.stop()
print("OPC UA Server Stopped")
```

Test Connection to Server

The screenshot shows the UaExpert interface with the 'Data Access View' pane. It displays a table with columns: #, Server, Node Id, Display Name, Value, Datatype, and Source. The first row shows a 'Temperature' node with a value of '22' and a source of '01:00C'. The 'Log' pane at the bottom shows a series of messages from the DA Plugin, including subscription creation and monitoring events.

#	Server	Node Id	Display Name	Value	Datatype	Source
1	Python OPC UA Server	NS2 Numeric2	Temperature	22	Double	01:00C

OPC UA Client from Integration Objects

The screenshot shows the 'Integration Objects' OPC UA Client interface. The 'Attribute' table is highlighted, showing details for the 'NodeClass' attribute. The table has columns for Attribute and Value.

Attribute	Value
NodeId	ns=2;i=2
NodeClass	Variable
BrowseName	2:Temperature
DisplayName	Temperature
Description	Temperature
WriteMask	0
UserWriteMask	0
Value	0
Data Type	Int64
ValueRank	Scalar
ArrayDimensions	System.UInt32[]
AccessLevel	Readable Writeable
UserAccessLevel	Readable Writeable
MinimumSamplingInterval	Continuous
Historizing	False

UaExpert OPC UA Client

The screenshot shows the 'Message' pane in UaExpert. It displays a list of messages with columns for Message Type, Timestamp, and Message. The messages include successful session creation and an error message regarding an invalid port.

Message Type	Timestamp	Message
[Control]	2023-11-29 13:57:08	Write operation of the variable [ns=2;i=2] succeeded.
[Control]	2023-11-29 13:56:56	Read operation of the variable [ns=2;i=2] succeeded.
[Control]	2023-11-29 13:56:45	A session "Session0" with the Endpoint [opc.tcp://127.0.0.1:1234/- [None:NoneBinary]] was successfully created.
[Error]	2023-11-29 13:56:38	Session creation failed. Exception: Invalid URI: Invalid port specified.

Get Nodeld

```
from opcua import Client

#OPC UA Server Python
url = "opc.tcp://127.0.0.1:1234"

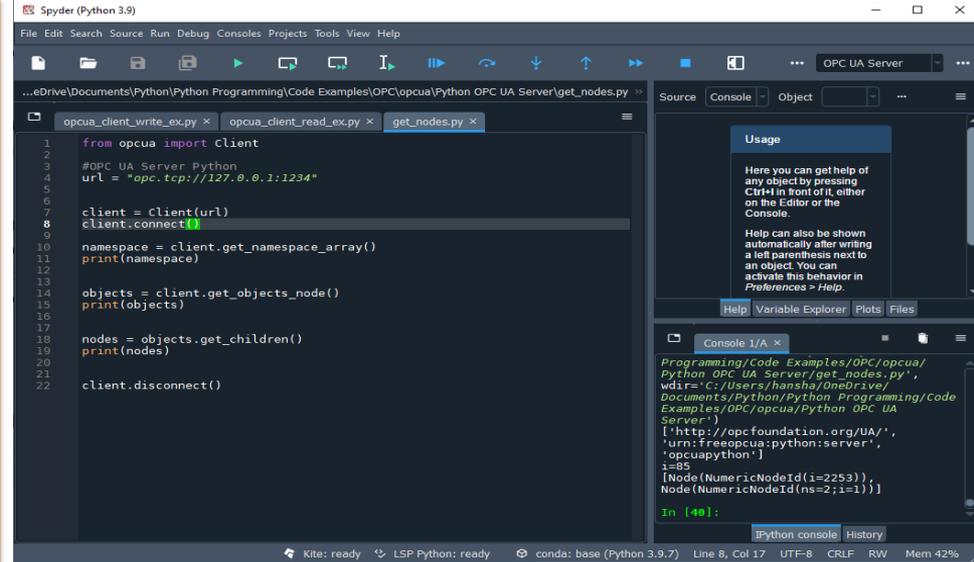

client = Client(url)
client.connect()

namespace = client.get_namespace_array()
print(namespace)

objects = client.get_objects_node()
print(objects)

nodes = objects.get_children()
print(nodes)

client.disconnect()
```

The screenshot shows the Spyder Python IDE with a script named 'get_nodes.py' open. The script connects to an OPC UA server at 'opc.tcp://127.0.0.1:1234' and retrieves the namespace array, objects node, and children nodes. The console output shows the following:

```
NamespaceArray(['http://opcfoundation.org/UA/', 'urn:freeopcua:python:server', 'opcua:python'])
[Node(NumericNodeId(i=2253)), Node(NumericNodeId(ns=2;i=1))]
In [40]:
```

This gives:
Nodeld = "ns=2;i=2"

OPC UA Client Write Example

```
from opcua import Client

#OPC UA Server Python
url = "opc.tcp://127.0.0.1:1234"
nodeId = "ns=2;i=2"

client = Client(url)
client.connect()

node = client.get_node(nodeId)
value = float(20)
node.set_data_value(value)

client.disconnect()
```

Write - Alternative Solution

```
from opcua import Client

#OPC UA Server Python
url = "opc.tcp://127.0.0.1:1234"

client = Client(url)
client.connect()

root = client.get_root_node()
nodeId = root.get_child(["0:Objects", "2:Sensors", "2:Temperature"])
print("NodeId:", nodeId)

node = client.get_node(nodeId)
value = float(20)
node.set_data_value(value)

client.disconnect()
```

OPC UA Client Read Example

```
from opcua import Client

#OPC UA Server Python
url = "opc.tcp://127.0.0.1:1234"
nodeId = "ns=2;i=2"

client = Client(url)
client.connect()

node = client.get_node(nodeId)
value = node.get_value()
print(value)

client.disconnect()
```

Read - Alternative Solution

```
from opcua import Client

#OPC UA Server Python
url = "opc.tcp://127.0.0.1:1234"

client = Client(url)
client.connect()

root = client.get_root_node()
nodeId = root.get_child(["0:Objects", "2:Sensors", "2:Temperature"])
print("NodeId:", nodeId)

node = client.get_node(nodeId)
value = node.get_value()
print("Value[°C]:", value)

client.disconnect()
```

Testing OPC Server and Clients

Usage

Here you can get help of any object by pressing **Ctrl+I** in front of it, either on the Editor or the Console.

Help can also be shown automatically after writing a left parenthesis next to an object. You can activate this behavior in **Preferences > Help**.
